

## Cylindrical roller bearing

Cylindrical roller bearing

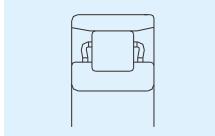

## Cylindrical roller bearing

The rollers of cylindrical roller bearings are often guided by two ribs of a certain ring. The cage, roller and guide ring make up an assembly, which can be separated from another ring. As separable bearings, they are easy to mount and dismount. When interference fit is required for the inner/outer ring and the shaft/housing, their advantages are more obvious.

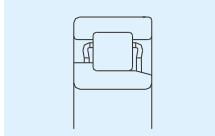

This type of bearing is often used to take radial load. Only single-row bearings with ribs on both inner and outer rings can take low constant axial load or high interval axial load. Compared with deep groove ball bearings of the same physical dimensions, this type of bearing's radial loading capacity is larger. The requirement for the machining accuracy of the shaft/housing bores for this type of bearing is higher.

### 1. Primary structure type

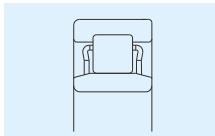

N type: outer ring without rib, inner ring with two ribs

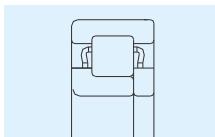

NJ type: outer ring with two ribs, inner ring with single rib

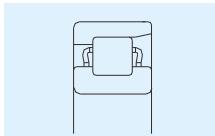

NU type: outer ring with two ribs, inner ring without rib

NUP type: outer ring with two ribs, inner ring with single rib and a plate

NF type: outer ring with single rib, inner ring with two ribs

The cages of bearings of the above structures often include: pressed steel, nylon, etc. Some models can be full of rollers without cages.

### 2. Allowable misalignment angle

Generally the shaft of the cylindrical roller bearing is not permitted to incline to the housing bore. However, when the load is light, the inner and outer rings of the single row cylindrical roller bearings are permitted to incline 2' mutually in axial direction. If the load is heavier, the permissible error is also larger, but is not permitted to exceed 4'.

### 3. Tolerance and clearance

As required, products of different class of tolerance can be provided. See Section 5 for the technical specification of the tolerance values.

### 4. Axial load capacity

For cylindrical roller bearings with ribs both on inner and outer rings, their axial load is related to the radial load they take and the lubricating methods. Maximum permitted axial load:

$$F_{ap} = KC_{or} ((n_g \cdot n) / (n_g + 2n)) \text{ Oil lubrication}$$

$$F_{ap} = KC_{or} ((n_g - 2.5n) / (n_g + 10n)) \text{ Grease lubrication}$$

$$F_{ap} < 0.4F_r$$

In the equations:

$F_{ap}$ : Maximum permitted axial load N

K: Coefficient related to the bearing dimension series

For 2, 3 series K=0.2

For 22, 33 series K=0.16

$C_{or}$ : static radial load rating of bearings N

$n_g$ : the limiting speed when the bearing only takes radial load. When  $F_r > 0.1C_r$ , the limiting speeds listed in the specification table shall be multiplied by the decreasing coefficient  $r/min$ .

n: bearing working speed r/min.

The axial load determined by the above formula can make Class 0 tolerance bearings (except improved and reinforced bearings) work normally in the following conditions:

Bearing temperature rise is 55°C for oil lubrication and 40 °C for grease lubrication. The bearing maximum temperature is 90 °C (the used lubricating oil viscosity is  $V_{so}=30\text{mm}^2/\text{s}$  and the drop point of grease is 170 °C).

For interval axial load, the permitted axial load can be improved 1 time, and for transient one, it can be improved 2 times. According to the working conditions, single row cylindrical roller bearings with larger axial load capacity can be provided.

### 5. Dynamic equivalent radial load

$$P_r = F_r$$

For cylindrical roller bearings taking axial load

For 2, 3 series:

$$P_r = F_r + 0.3F_a \quad (0 \leq F_a/F_r \leq 0.12)$$

$$P_r = 0.94F_r + 0.8F_a \quad (0.12 \leq F_a/F_r \leq 0.3)$$

For 22, 23 series:

$$P_r = F_r + 0.2F_a \quad (0 \leq F_a/F_r \leq 0.18)$$

$$P_r = 0.94F_r + 0.53F_a \quad (0.18 \leq F_a/F_r \leq 0.3)$$

### 6. Static equivalent radial load

$$P_{eq} = F_r$$

### Double row cylindrical roller bearing

Double row cylindrical roller bearings are featured by small cross section, high load capacity and rigidity. They are mainly used in machine tools, rolling mill necks, plastic rollers, grinders as well as large gear cases, etc.

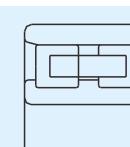

C&U specializes in manufacturing NN type and NNU type double row cylindrical roller bearings. The rings and components of this type of bearings can be mounted separately. NNU type double row cylindrical roller bearings' outer rings, rollers and cage components can be mounted separately with its inner rings. Or all the parts can be mounted separately to facilitate the mounting, inspection and maintenance of bearings.

There are two types of the internal bores of double row cylindrical roller bearings: cylindrical bore and tapered bore. C&U provides both cylindrical bore and tapered bore type for NN and NNU bearings. When the bearings with tapered bores are mounted, a certain radial interior clearance or preload might be achieved.

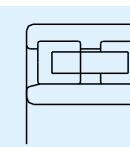

The outer rings of some double row cylindrical roller bearings have lubricating grooves or oil holes, which both C&U are able to provide. If they are not listed in the dimension table, please consult the technical center of C&U Group.

### 1. Structure

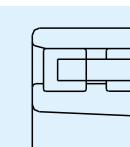

- (1) NN 0000 type (Fig. 1): inner ring with rib, outer ring without rib, cylindrical internal bore;
- (2) NNU 0000 type (Fig. 2): inner ring without rib, outer ring with rib, cylindrical internal bore;
- (3) NN 0000K type (Fig. 3): inner ring with rib, outer ring without rib, tapered internal bore, tapering 1:12;
- (4) NNU 0000K type (Fig. 4): inner ring without rib, outer ring with rib, tapered internal bore, tapering 1:12;
- (5) NN 0000/W33 type (Fig. 5): inner ring with rib, outer ring without rib, cylindrical internal bore, outer ring with lubricating groove and oil hole;
- (6) NNU 0000/W33 type (Fig. 6): inner ring without rib, outer ring with rib, cylindrical internal bore; outer ring with lubricating groove and oil hole;

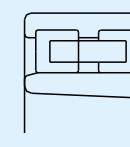

NN 0000 type  
(Fig. 1)

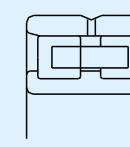

NNU 0000 type  
(Fig. 2)

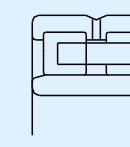

NN 0000K type  
(Fig. 3)

NNU 0000K type  
(Fig. 4)

NN 0000/W33 type  
(Fig. 5)

NNU 0000/W33 type  
(Fig. 6)

### 2. Dimension accuracy & running accuracy

See Chapter 5 for the technical specification for the requirements of dimension accuracy and running accuracy.

### 3. Radial clearance

See Chapter 5 for the technical specification of the radial clearance values of cylindrical bore bearings and tapered bore bearings. These data are the clearance values before the bearing mounting without preload.

### 4. Cage

Double row cylindrical roller bearings generally uses machined brass cages.

### 5. Dynamic equivalent load

$$P_r = F_r$$

### 6. Static equivalent load

$$P_{eq} = F_r$$

## Four-row cylindrical roller bearing

Four-row cylindrical roller bearings are known for their simple structure, high accuracy, high dynamic load rating, etc. However, they are incapable of taking axial load. Because the inner ring has no rib, the inner ring and outer ring with components can be mounted separately (with full set of roller and cage). Therefore, they are easy to mount and dismount, and are the first choice for various cold and hot rolling mills whose roll are frequently changed.

### 1. Structure

- (1) FC type (Fig. 1): two outer rings with rib, full set of rollers and cage's outer ring components, and an inner ring;
- (2) FCD type (Fig. 2): two outer rings with rib, full set of rollers and cage's outer ring components, and two inner rings;
- (3) FCDP type (Fig. 3): outer ring with plate, and two inner rings.

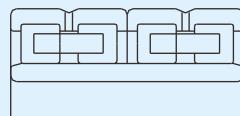

Fig. 1 FC type

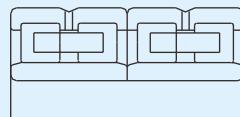

Fig. 2 FCD type

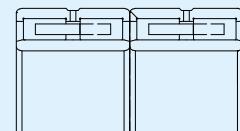

Fig. 3 FCDP type

### 2. Dimension accuracy & running accuracy

See Chapter 5 for the technical specification for requirements of dimensional accuracy and running accuracy of four-row cylindrical roller bearings.

### 3. Radial clearance

As radial support bearings of rolls, their working conditions are very severe. The actual working clearance depends on load, rotation speed, lubrication, temperature rise, design structure, fitting surface roughness and bearing bore diameter fitting interference. Proper radial clearance shall be selected according to specific circumstances.

C3 clearances are recommended for cold rolling mills or bearing bore diameter with small fitting interference. C4 clearances are recommended for hot rolling mills or bearing bore diameter with large fitting interference. See the technical specification details in Section 6.

### 4. Cage

Four-row cylindrical roller bearings generally use lathe machined brass cages.

### 5. Dynamic equivalent load

$$P=F_r$$

### 6. Static equivalent load

$$P_0=F_r$$

## Split cylindrical roller bearing

It is difficult and inconvenient to handle, inspect and replace solid bearings for machines and equipment due to structural restriction, especially for large and oversize bearings.

The split bearings developed by C&U have solved this problem, and greatly facilitate the handling of bearings, and reduce the cost.

### 1. Application scope of split bearing

Split bearings can be used in all industrial fields, i.e. various crankshaft, multi-support axle, mandrel and major axis with several supporting points, etc., where bearing mountings are restricted.

- Cold bed for steel rolling
- Continuous caster
- Elevator and conveyer
- Material handling equipment
- Rotary furnace conveyance device
- Conveyance device
- Paper manufacturing machinery
- Rotary kiln driver

### 2. Advantages of split bearing compared to solid bearing

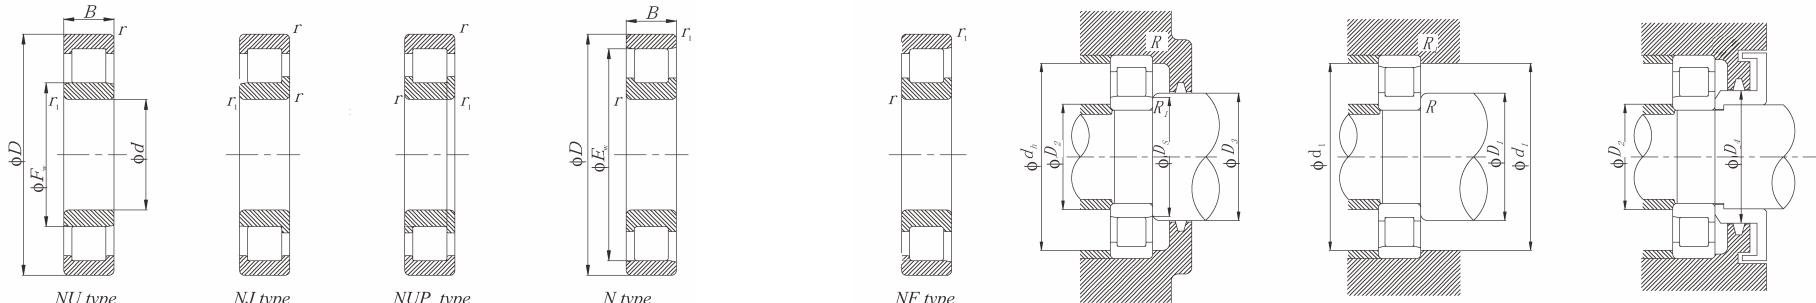

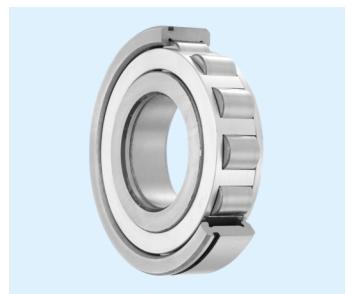

- Easy mounting
- Short machine stop time
- No need to dismount related devices

### 3. Structural features of split cylindrical roller bearings

- Inner ring, outer ring and cage all consist of two split semicircle parts
- The internal bore is a cylindrical bore, which can be mounted on the axle directly.
- Able to substitute for solid bearing

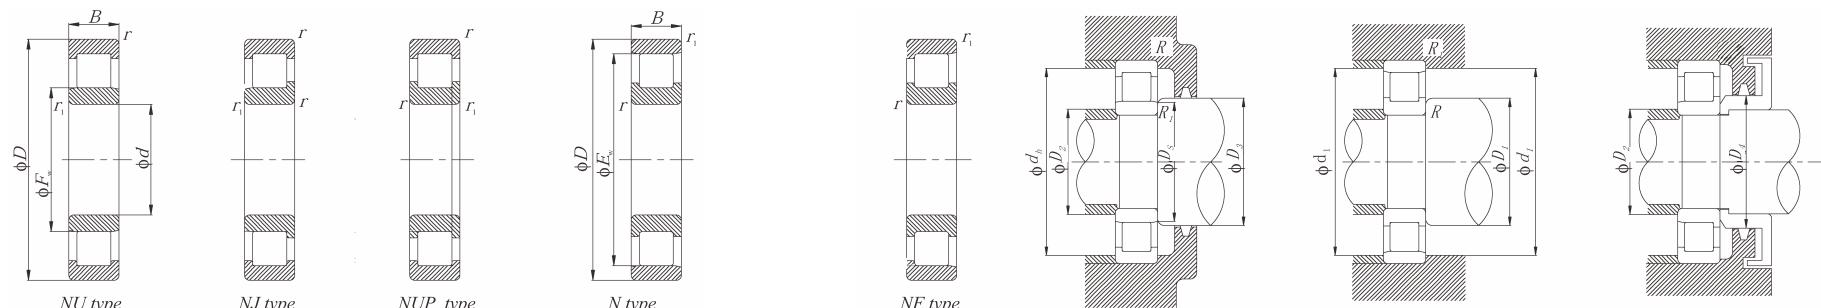

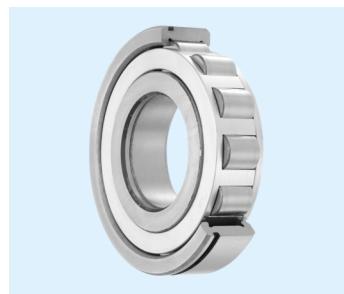

### 4. Advanced technology of split cylindrical roller bearing

Split cylindrical roller bearing uses advanced bearing production technology to guarantee the safe running of bearings: finite element analysis, CAD optimum design, bearing structure parameters which can achieve maximum load rating, advanced cutting technology and cutting scheme, advanced heat treatment techniques to achieve fine internal quality, reliable joint, and excellent minimum fastener design.
